

Subject	(Q13) Positive aspects	(Q14) Negative aspects	Other comments
12	Import of resources Query Adding EClasses to my own ecore model	Better naming of the queries Model Viewer seemed to have bugs	I found the given task too complicated for the given time. A very simple task with very simple repositories would be better.
13	The ability to import various sources simply through an editor. Query mechanisms, although the naming could be better. The fluently working resource explorer.	You must select a project when importing resources (1st step), however why is this necessary if there is only one + no hint if nothing selected! All imported repositories are lost at a crash -> Save that on the fly! The search names are somehow confusing. It would be better to show the description instead of the name.	Maybe a diff-view when coding to the Ecore Model, otherwise I don't know which transitive classes will be added.
14	Good for bootshapping a model Simple workflow (for basics)	Creating ecore structure should not overwrite unsaved elements Bugs on "Reveal on repository"	I like the idea of the product in general. I think it would be a great add to existing modelling tools. One improvement for me would be to have it more integrated in the modelling workflow instead of having to jump around 4 windows.
15	The ability to import various sources simply through an editor. Query mechanisms, although the naming could be better. The fluently working resource explorer.	User interface but not necessary	
16	The structure for modelling are already given. It is just needed to search. The attributes are consistent and the ecore model easy to modify.	Create more pre-given domains. Have access to the diagram mode. Be aware of the references. The resource explorer is too much. It is full of boxes and difficult to read.	
17	Definitely bring some productivity increase when we need to build a metamodel for the domain which we are not familiar.	The results of search appear in the tree view control as nodes out and so on. I can't see which results correspond to which query. They are not even sorted alphabetically or some other way. If I make 10 queries and I have 10 results. I am confused where to look for my results. I couldn't make the "Add repository" work. Fix some bug there. Documentation!!!!	

18	It increases the productivity. It is easy to use. It provides additional features to explore the relationships between ecore classes.	The semantic of the ecore classes was not clear. The search feature is a very good idea but I think it requires more time to get the most benefit of using it. Even I understood the task description and the domain specific knowledge behind it, I was not able to find all the right elements I need to complete the task.	
19	Really useful to improve the quality of models. Easy to use. Search.	Search: Possibility to search over all imported repositories. Search: Simpler? Why exact, inexact, wordnet? Possibility to create diagram structure and file. I prefer to model with diagrams instead of ecore. Documentation of how to use would be nice.	
22	Easy to navigate Easy to import Easy to integrate with model	More guidelines on how to use the tool (workflow) Visualizing model. Support for linking resources.	
23	Easy import of repositories. Well structured (good overview) Easy to use. With short tutorial needed before hand.	Resource explorer was not showing any resources after loading. After adding objects from repository ad eclass previously (manually) general classes were deleted / reset (= references were deleted) How performance with large repositories.
